Harsh Vaishnav

7300274802 | harshvai0314@gmail.com | LinkedIn | GitHub | Portfolio

Final-year CS student who builds full-stack and GenAI systems end to end: RAG pipelines, LangGraph agents, and containerized services deployed on AWS. Looking for a six-month on-site internship in Gurugram; **available to join immediately**.

Education

Indian Institute of Information Technology (IIIT), Nagpur Aug 2023 – May 2027
B.Tech, Computer Science and Engineering **CGPA: 7.65**

Projects

summary.ai: Multi-tenant RAG Platform (HackIndia Global Finals) *Apr 2025 – Aug 2026*

- Document Q&A app on **FastAPI, React and MongoDB**, with JWT auth and multi-tenant document handling.
- Retrieval uses **FAISS** with MMR and multi-query expansion; Tavily and BeautifulSoup add web search and scraping, with Mistral and Gemini as the LLMs.
- Measured quality with **DeepEval and LangSmith** (relevancy, faithfulness, toxicity, PII). Tuning chunking and prompts took contextual relevancy from about **35% to 65%** at **100% faithfulness**.
- React frontend built around Context API and custom hooks for auth, documents and search, so state is shared without prop drilling.

Harsh Bank of India: Banking Platform with AI Assistant *Aug 2026*

- **Node.js, Express and MongoDB** backend with a **double-entry ledger**; balances are derived with aggregation rather than stored.
- Fund transfers run inside MongoDB transactions (ClientSession) with **idempotency keys**, so retries don't double-post and failures roll back cleanly.
- Separate FastAPI service with a **LangGraph multi-agent** chatbot (Grok API) and an **MCP server** for expense tracking and live crypto/stock data.
- Three Docker images (backend, AI service, MongoDB) on a Compose network, deployed to **AWS EC2** behind Nginx with Security Groups and IAM roles.

Technical Skills

- **Languages:** C++, Python, JavaScript, Java, C, SQL
- **GenAI and agents:** RAG, LangChain, LangGraph, LangSmith, DeepEval, MCP, FAISS, ChromaDB
- **Backend and data:** FastAPI, Node.js, Express.js, REST APIs, JWT, Socket.IO, MongoDB, MySQL
- **Frontend:** React, Tailwind
- **DevOps:** Docker, Docker Compose, GitHub Actions, AWS (EC2, IAM), Nginx, Git, Postman
- **Core CS:** Data Structures and Algorithms, OOP, Operating Systems, DBMS, Computer Networks

Achievements

- **HackIndia (Global Finalist): top 20 of 29,000+** participants in India's largest AI and Web3 hackathon; presented to the CEOs of SingularityNET and Mindcracker.
- **Hackathon (3rd place):** Rebranding Wars, redesigned Zepto's visual identity in Figma within 6 hours.
- **Competitive programming:** LeetCode **1863 (Knight)**, CodeChef **1611 (3 star)**; 1000+ problems solved and 100+ contests.

Positions of Responsibility

- **Dot-Slash Coding Club (Senior Core Member):** picked among the top 10 coders in college; mentor juniors in DSA and competitive programming.
- **Flash Code (Event Head):** ran a coding contest with **500+ registrations** and a team of 10 volunteers covering problem setting, logistics and evaluation.
